

SHUBHAM KALE

Pune, Maharashtra

☎ +91-8208565985 | ✉ shubhamkale.sits.comp@gmail.com |  LinkedIn |  GitHub |  LeetCode

SKILLS

Programming Languages: Java, JavaScript, Python, HTML, CSS, SQL

Frameworks: Spring Boot, REST APIs, microservices, React, Hibernate, OAuth2, JSON, JUnit, Mockito

Databases: MySQL, MongoDB, PostgreSQL, Elasticsearch, Redis

Tools/DevOps: Git/GitHub, Kafka, Docker, Kubernetes, Maven, Postman, Linux, Jira

EXPERIENCE

CTC Tech Services

May 2026 – Present

Software Developer Intern

- Designed an on-prem log observability agent for a Finacle-based core banking system, processing 50,000+ daily REST/FI XML/ISO8583 transactions with zero-duplicate incremental offset tracking across rotating PVC-mounted log files.
- Built a hot-reloadable regex detection engine and a Redis-backed fingerprint deduplication system (hash + TTL window), cutting duplicate alerts by 90% and eliminating WhatsApp alert storms.
- Designed a multi-bank, multi-country incident schema (audit-compliant separation of raw log events vs. operational incidents); used ShedLock + Resilience4j to prevent duplicate job execution across pods, improving notification reliability by 70% and cutting manual log investigation by 85%.

Peakprosyps

May 2024 – May 2025

Backend Developer Intern

- Designed and deployed 15+ high-performance RESTful APIs using Spring Boot and MongoDB for scalable production
- Implemented advanced security features including 2FA, brute-force protection, and TOTP authentication using Spring Security, reducing unauthorized access risk.
- Optimized backend response times through efficient data structures, query optimization, and collaborated in a 6-member Agile team for sprint planning, code reviews, and feature delivery.

PROJECTS

Event Management Platform — Java | Spring Boot | Redis | Elasticsearch | Kafka | Docker

- Engineered a production-grade Event Management platform with 80+ REST APIs using Spring Boot 3.x, implementing JWT authentication, OAuth2 (Google login), and role-based access control (RBAC) to manage event lifecycle, venues, and organizations at scale.
- Integrated Redis caching, Elasticsearch-based fuzzy search, auto-geocoding, and AI-driven recommendations (Spring AI), optimizing response times and enabling intelligent event discovery across large datasets.
- Designed a scalable architecture evolving from monolith to microservices using Kafka, Docker, and GitHub Actions CI/CD, ensuring high availability, asynchronous processing, and real-world deployment readiness.

AI Research Assistant — JavaScript | React | Spring Boot | Java | Gemini AI

- Built a Full Stack Chrome Extension with a responsive JavaScript/React frontend and browser APIs to perform real-time DOM scraping, with accessible UI components following responsive design best practices.
- Developed a secure end-to-end data pipeline with a Java-based REST API backend, delivering fast, actionable summaries that improved research efficiency by 60% for 200+ users.

Banking Portal — Spring Boot | Spring Security | JWT | Docker

- Developed a RESTful banking system using Spring Boot with features like account management, fund transfers, and transaction tracking, secured using Spring Security and JWT-based authentication.
- Designed reliable transaction processing with proper exception handling and deployed the application using Docker for consistent and scalable execution.

EDUCATION

B.E (Computer Science) | Sinhgad Institute of Technology & Science, Pune | CGPA: 7.37 (Aug 2020 – Jun 2024)

ACHIEVEMENTS

Solved 200+ Data Structures and Algorithms (DSA) problems on LeetCode.

Selected among Top 5 teams (out of 50+) in college Hackathon for a real-time collaboration tool.

CERTIFICATIONS

Java Data Structures and Algorithms — Core2Web

Jira Fundamentals — LinkedIn
